

PROPOSED COMPOUND WALL & ACCESS LAYOUT

2D SITE PLAN — OFFICE MOG & HOUSE MOG (traced from marked-up reference sketch)

LEGEND	
	Proposed boundary wall — 0.40 m thick / 2.80 m high
	Vehicle gate (Main Gate / Truck Gate) — double-leaf
	Pedestrian emergency door (perimeter wall)
	Building entrance door (House Entry Door)
	Existing building (reference footprint — Office MOG / House MOG)
	Site / compound boundary (centreline of wall)
	North arrow
Dimension lines shown where no survey figure is available are labelled "TBD".	

FIELD MEASUREMENTS / TBD
No dimensions were supplied with the reference sketch. The following must be confirmed by site survey before construction:
- Overall site dimensions TBD - Main gate width TBD - Truck gate width TBD - Emergency door widths (all) TBD - Building-to-wall setbacks TBD - Office MOG building dimensions TBD - House MOG building dimensions TBD - Wall corner/bend coordinates (for setting-out) TBD

GENERAL NOTES
- Proposed boundary wall thickness: 0.40 m. - Proposed boundary wall height: 2.80 m. - Layout geometry follows the supplied reference image; every bend, offset and opening in the marked-up sketch has been preserved. - Existing buildings (Office MOG, House MOG) are shown for reference only; footprints are not redesigned. - Final construction dimensions must be verified by site survey. - Gate and door widths must be confirmed before construction. - Do not scale this drawing — no surveyed dimensions were supplied. - This is a 2D planning/layout drawing; it must be field-verified before construction. - Drawing is oriented to match the reference image (see North arrow); true north to be confirmed on site.

ACCESS POINTS SCHEDULE			
#	DESIGNATION	TYPE	LOCATION (per reference image)
1	MAIN GATE	Perimeter vehicle/ped. gate	Left (west) boundary wall, mid-lower section
2	EMERGENCY DOOR	Perimeter pedestrian door	Upper/right (north) boundary wall
3	BACK GATE — TRUCK ACCESS	Perimeter vehicle gate	Lower/central boundary wall (office ↔ house transition)
4	EMERGENCY DOOR	Perimeter pedestrian door	Lower/right boundary wall, House MOG compound
5	HOUSE ENTRY DOOR	Building entrance door	North face of House MOG building (not the wall)
Note: item 5 is a building door and is independent of the four perimeter wall gates/doors (items 1–4). No access point has been relocated, merged, or invented.			

PROPOSED COMPOUND WALL & ACCESS LAYOUT			
2D SITE PLAN — OFFICE MOG & HOUSE MOG			
Wall thickness:	0.40 m	Date:	2026-08-28
Wall height:	2.80 m	Drawing No.:	SP-001
Scale:	NTS — NOT TO SCALE	Revision:	A — Concept
Status:	CONCEPT / FOR REVIEW	Drawn:	Claude (AI-assisted)
Basis:	Marked-up reference sketch	Format:	SVG (vector)
This drawing converts a hand-marked reference image into a 2D vector plan. Wall geometry, gate/door locations and building footprints follow the reference sketch; no dimensions were invented. Field survey required before construction — see FIELD MEASUREMENTS / TBD panel.
